PREFACE

In compliance with the request of a deputation of Yacht Owners and others interested in Yachting, the Committee of Lloyd's Register of Shipping determined in 1877 to provide a Register for the faithful and accurate Registration of Yachts and to adopt Rules and Regulations for the Classification of this description of vessel.

The Register of Yachts, which is printed solely for the use of Subscribers, was first issued in 1878, and has since been issued annually, except during the years 1916 to 1918 and 1940 to 1946. A supplement containing additions and corrections is usually issued during the year.

The Register of Yachts contains the names, particulars and characters of Yachts classed by the Society, together with the particulars of other Yachts which are considered to be of interest to Subscribers, illustrated plates of the Flags of Yacht and Sailing Clubs, together with a List of Club Officers, an illustrated List of the Distinguishing Flags of Yachtsmen, a List of the Names and Addresses of Yacht Owners, and much other information of interest to Yachtsmen.

With the Flag Plates of the 1947 Volume a departure has been made from the previous practice of showing the yacht's name under the private flag. Instead, only the name of the owner is now inserted. This action has been taken chiefly to eliminate as far as possible inaccuracies resulting from changes of name and ownership of yachts reported during the reprinting of the Register.

Of American and Canadian Yachts particulars of only the larger vessels are included in the book, as a separate Register containing a List of Yachts of the United States and Canada is published from the Society's Office at 17, Battery Place, New York.

Information for the Register is obtained from the Society's Surveyors, the Registrar General of Shipping, Yacht Owners, Builders, Designers, and from various other sources. It would be appreciated if Yachtsmen, and others interested in the book, would assist the Committee in making it as complete and accurate as possible by giving early intimation of any changes of ownership, by forwarding any other information of interest to the compilers, and by replying promptly to any enquiry which may be addressed to them by the Society.

In this connexion it may be explained that although the book is published in May, it is necessary for the work to be placed in the Printers' hands by the middle of January, the Register Section being passed for press alphabetically from that time onward until the end of February.

The Society undertakes, upon request of the responsible parties, the survey of Yachts during construction or of Yachts already built, with a view to Classification being assigned by the Committee of Lloyd's Register. Particulars can be obtained upon application to the Head Office, or to any of the Society's Surveyors.

71, Fenchurch Street, London, E.C.3. *May*, 1947.

PRÉFACE

Pour répondre à la demande d'une délégation de propriétaires de yachts et d'autres personnes intéressées à la navigation de plaisance, le Comité du Lloyd's Register of Shipping décida, en 1877, de publier un Registre pour l'inscription des yachts avec leurs caractéristiques, et d'adopter des Statuts et Règlements pour la Classification des navires de cette catégorie.

Le "Yacht Register," qui est réservé uniquement à l'usage des abonnés, a paru pour la première fois en 1878 et, depuis lors, a été publié régulièrement, exception faite pour les années 1916 à 1918 et 1940 à 1946. Un supplément donnant les additions et corrections apportées à l'ouvrage est ordinairement publié dans le courant de l'année.

Le "Yacht Register" contient les noms et les caractéristiques, des yachts cotés par la Société, ainsi que les noms des autres yachts avec des renseignements qui sont de nature à intéresser les abonnés. Il contient, en outre, des illustrations de pavillons de yacht clubs et de sociétés de navigation à la voile, ainsi qu'une liste des Membres du Bureau des clubs, une liste illustrée des pavillons particuliers, une liste des propriétaires de yachts avec leur adresse, et de nombreux autres renseignements utiles aux personnes intéressées à la navigation de plaisance.

Dans l'édition 1947, la pratique de mentionner les noms des yachts sous les pavillons particuliers, dans les planches de pavillons, a été abandonnée. Maintenant, seul le nom du propriétaire y figure. Ce remaniement a été opéré afin d'éviter, dans la mesure du possible, les inexactitudes dues aux changements de noms et de propriétaires de yachts signalés durant la mise sous presse du Registre.

71, Fenchurch Street, Londres, E.C.3. *Mai* 1947.

En ce qui concerne les yachts américains et canadiens, le "Yacht Register" ne donne des renseignements que sur les plus grands des yachts battant ces pavillons. Un Registre séparé est publié par les Bureaux de la Société, 17, Battery Place, New York, contenant une liste des yachts des Etats-Unis et du Canada.

Les renseignements qui figurent au "Yacht Register" proviennent des Inspecteurs de la Société, du Département de la Marine Britannique, des propriétaires de yachts, des constructeurs, des dessinateurs et d'autres sources diverses. Le Comité du Lloyd's Register serait très reconnaissant aux Yachtsmen et autres personnes qui s'y intéressent, de vouloir bien l'aider à rendre le livre aussi complet et aussi exact que possible, en lui signalant, en temps utile, les mutations qui se produiraient dans la propriété des yachts, ou tout autre renseignement de nature à intéresser les éditeurs, et en répondant promptement aux demandes de renseignements qui pourraient leur être addressées par la Société.

A ce sujet, il y a lieu de remarquer que, le Registre étant publié en Mai, il est de toute nécessité que l'ouvrage soit remis aux imprimeurs au milieu de Janvier, la partie relative aux Yachts étant imprimée alphabétiquement à partir de ce moment jusqu'à la fin du mois de Février.

La Société entreprend, à la demande de personnes responsables, la surveillance des yachts pendant leur construction ou l'inspection des yachts existants, en vue de l'attribution d'une cote, par le Comité du Lloyd's Register. S'adresser pour tout renseignement à ce sujet au Siège de la Société, à Londres, ou aux Inspecteurs régionaux.

KEY TO THE REGISTER

KEY TO LLOYD'S REGISTER OF YACHTS.

SYMBOLS OF CLASSIFICATION, COLUMNS 10, 11 & 12.

(All Abbreviations employed in the Register are explained in the Alphabetical Key, page 29.)

100A Character of Yachts built of Steel or Iron in accordance with or equal to the Society's Rules and Tables.

A Without a numeral prefixed, character assigned to Steel Yachts not built in accordance with the requirements of the Society's Rules, but found to be efficient.

A Without a numeral prefixed, character assigned to Iron and Steel Yachts already built to which the Society's Rules do not apply.

A Character of Wood or Composite built Yachts of the first class. The figures prefixed to the character thus, 18 A, 12 A, indicate the term of years for which the Vessel is at present classed. Figures placed within parentheses thus, (17)A, C(11), indicate the expired term of years — originally if on the first line, and on continuation or restoration if on lower lines.

A Without a term of years indicates that the Yacht, though not built according to the Society's Rules, is considered worthy of the class assigned.

R Character of Yachts built in accordance with the Rules for Yachts of the International Rating Classes both as regards scantlings and equipment. The figures prefixed to the character thus, 16 R, 14 R, in the case of Wood and Composite Yachts, indicate the term of years for which the Yacht is at present classed.

1 The figure 1 after a character signifies that the Yacht is well and efficiently equipped (*see* Equipment Tables of the Society's Rules for Yachts).

A line thus — after the letter A, A or A signifies that the equipment is *not* in accordance with the Society's Rules.

In the case of Yachts classed R, the figure 1 for equipment is not employed, the equipment being required in these cases to be in accordance with the Rules for Yachts of the International Rating Classes before the class is assigned.

† Prefixed to the class of a Yacht indicates that she is also classed in the Register Book for Merchant Ships, and that the scantlings are equal to the requirements of the Society's Rules for the same.

The figures under a Character denote the date when the Yacht was last Surveyed by the Society's Surveyors.

When the port and date of Survey only appear, without the Yacht's Character, the Character has expired or been withdrawn because a Survey prescribed in the Society's Rules has not been held, or on account of non-payment of fees.

✠ This sign before a Character thus, ✠100A1, denotes that the Yacht has been built under the Special Survey of the Society's Surveyors.

✠ This sign before a classification record of Machinery thus ✠LMC ✠NE&B indicates that the Engines and Boilers or both (according to the record which follows) have been built under the Special Survey of the Society's Surveyors.

SYMBOLS OF CLASSIFICATION, COLUMNS 10, 11 & 12—*continued.*

—— A black line with date underneath indicates that the
3,39 Yacht's Character was expunged from the Society's Register of Yachts at the date mentioned because, on account of reported defects, the Yacht was not entitled to a Character.

—— A red line with date underneath indicates that the
3,39 Yacht's Character was expunged from the Society's Register of Yachts at the date mentioned because, on account of non-compliance with the Society's Rules as regards Surveys, the Yacht was not entitled to retain her Character therein.

... This sign with date underneath indicates that the
3,39 Yacht's class was withdrawn from the Society's Register of Yachts at Owner's request.

When the eleventh and twelfth Columns are left blank, the Yacht has never been Classed in the Society's Register of Yachts.

EXPLANATION OF RECORDS IN THE REGISTER OF YACHTS.

Tonnage (column 4). Thames Measurement Tonnage is an approximate representation of the internal capacity of a yacht derived from a system of measurement adopted by the Royal Thames Yacht Club in 1854. The rule for computing the Thames Measurement tonnage is as follows :— From the length (measured from the fore side of stem to the after side of sternpost on deck) deduct the breadth, multiply this result by the breadth, and that product by the half breadth, and divide by ninety-four. This tonnage appears in the Register in the case of every Yacht, where these dimensions are known, and is printed below the official tonnages where these tonnages are given.

In the cases of Yachts which are officially registered, the official registered tonnage measured according to the law of the country to which the Yacht belongs is recorded in type like that shown at the side hereof. } 204·51 (Net) 546·65 (Gross)

When the tonnages are given in italics, they are not those assigned by the country to which the yacht now belongs. } *204·51* (Net) *546·65* (Gross)

Dimensions (column 5). The dimensions which are printed on the top line are given in feet and tenths of a foot and are those employed for calculating Thames Measurement tonnage. In the case of yachts classed by Lloyd's Register, these are obtained from the Society's Surveyor's First Entry Report of Survey ; where yachts are not classed by the Society, but are officially registered, the dimensions are obtained from the vessel's Certificate of Registry. In other cases the dimensions are as given on returns received from owners, builders, etc.

The **length** entered on the top line is the length measured from the fore side of stem to the after side of sternpost on the range of the upper deck, except in the case of unclassed yachts which are officially registered as British vessels, when the registered length is recorded.

The length entered on the second line is the length over all.

The length entered on the third line is the length on the water line.

The **breadth** recorded is the extreme breadth.

The **depth** is taken from the top of floors to top of upper deck beams amidships.

The **headroom** is the maximum clear space from top of floor or cabin deck to underside of beams at upper deck or coach roof *in way of Owner's accommodation* (*saloon*).

The **draft** is the maximum draft to bottom of keel.

The **sail area** recorded is the area of the working sails and is given in square feet.

EXPLANATION OF RECORDS IN THE REGISTER OF YACHTS—*continued.*

Date of Build (column 7). The date of build recorded in the Register for yachts built previous to 1903 under the special survey of the Society's Surveyors, is the date when the yacht was launched. For yachts built from 1903-1924 the last date of survey for first entry of classification is recorded when such survey was completed within six months of the date of launching, but when the first entry survey was not completed within that period, six months later than the date of launching is then recorded as the date of build. For yachts built subsequent to 1924 the date of completion of the special survey is taken as the date of build.

The date of build of steam engines and boilers is only recorded where the same differs from the date of build of the yacht, and, in these cases, the date appears in column 8.

Internal Combustion Engines (column 8)—

Alcohol Motor indicates an internal combustion engine using alcohol as fuel.

Gas Engine indicates an internal combustion engine using gas as fuel.

Oil Engine indicates an internal combustion engine using heavy oil such as Astatki, Mazut, etc., as fuel.

Paraffin Motor indicates an internal combustion engine using refined oil with a flash point higher than 73° F., such as Paraffin oil, Kerosene, Solar oil, etc., as fuel.

Petrol Motor indicates an internal combustion engine using highly volatile oils, such as Benzoline, Gasoline, Petrol, etc., as fuel.

Nominal Horse Power (column 8). The formulæ from which the Nominal Horse Powers of Steam Reciprocating Engines are calculated are :—

1. In cases of yachts in which the particulars of boiler pressures and surfaces are known :—

$$NHP=\frac{P+340}{1000}\left(\frac{D^2\sqrt{S}}{100}+\frac{H}{15}\right)$$ where the boiler pressure is below 160lb.

$$NHP=\frac{P+590}{1500}\left(\frac{D^2\sqrt{S}}{100}+\frac{H}{15}\right)$$ where the boiler pressure is 160lb or above.

For determining the Nominal Horse Power of Steam Turbine Engines $\frac{SHP}{6}$ is to be substituted in the above formulæ for $\frac{D^2\sqrt{S}}{100}$ where SHP is the total Shaft Horse Power.

If the boilers are fitted with Forced Draught or Induced Draught appliances, then $\frac{H}{12}$ is taken instead of $\frac{H}{15}$.

2. In cases where particulars of the boiler pressures and heating surfaces are not known :—

$$NHP=\frac{D^2\sqrt{S}}{100}$$ for Triple and Quadruple Expansion Engines.

$$NHP=\frac{D^2\sqrt{S}}{120}$$ for Compound Engines.

$$NHP=\frac{D^2\sqrt{S}}{130}$$ for Single Engines.

In the above Rules, D = diameter of L.P. Cylinder in inches.
S = Stroke in inches.
H = Heating surface in square feet.
P = Working pressure in lb per square inch.

In vessels fitted with Heavy Oil Engines :—

$$NHP=\frac{C\times N\times D^2}{\frac{S}{D}+50}$$

where NHP=the Nominal Horse Power.
N=the number of power cylinders.
D=the diameter of the power cylinders in inches.
S=the stroke of the piston in inches. In the case of the opposed piston type of engines S is half the combined stroke of the pistons.
C= 5 for Engines of the 4 S.C.S.A. type.
=10 for Engines of the 4 S.C.D.A. type
= 9 for Engines of the 2 S.C.S.A. type.
=18 for Engines of the 2 S.C.D.A. type.
=16 for Engines of the 2 S.C.S.A. opposed piston type.

In vessels fitted with Petrol or Paraffin engines :—

$NHP=\frac{BHP}{3{\cdot}5}$, where BHP is the Brake Horse Power at full power.

The **R.O.R.C. Ratings** (column 9) are furnished by the Royal Ocean Racing Club, and are those assigned for sailing *without* propeller.

Asterisk * (column 9) before an Owner's name indicates that he has obtained the Board of Trade Certificate of competency as Master.

TABLE EXPLICATIVE DU REGISTRE DES YACHTS.

MARQUES DE CLASSIFICATION, COLONNES 10, 11, & 12.

Toutes les abréviations, employées dans le Registre, ont leur définition dans la Table Alphabétique (*Voir* page 37.)

100A Cote des Yachts, en fer ou en acier, construits conformément, ou d'une façon équivalente, aux Règlements et aux Tables de la Société.

A Non précédé d'un coéfficient, est une cote pour les yachts en acier pas construits conformément aux exigences des Règlements de la Société, mais reconnus comme étant en bon état.

A Non précédé d'un coefficient, est une cote pour les Yachts, en fer ou en acier, déjà construits et auxquels les Règlements de la Société ne s'appliquent pas.

A Première cote des Yachts, en bois ou composite. Le coefficient qui précède la cote, comme-ci : 18 A, 12 A indique le nombre d'années pour lesquelles le Yacht est actuellement coté. Le coefficient, placé entre parenthèses, comme-ci : (17) A, C (11), indique les périodes expirées pour lesquelles le navire avait été coté. Placé à la première ligne, le coefficient indique la période originelle, aux lignes suivantes les périodes de continuation ou de restauration.

A Sans terme d'années, indique que le Yacht, quoique n'étant pas construit conformément aux Règlements de la Société, est considéré comme méritant la cote assignée.

R Cote des Yachts construits conformément aux Règlements de la jauge internationale aussi bien en ce qui concerne les échantillons que l'armement. Le coefficient qui précède la cote, comme-ci : 16 R, 14 R, dans le cas des Yachts en bois ou composite, indique le nombre d'années pour lesquelles les Yachts sont actuellement cotés.

1 Le chiffre 1, à la suite d'une cote, indique que le Yacht a un armement efficace et suffisant. (*Voir* Tables de l'Armement des Règlements de la Société pour les Yachts.)

— Ce signe, à la suite des lettres A, A ou A indique que l'armement n'est pas conforme aux Règlements de la Société.

Pour les Yachts cotés R, il n'est pas fait usage du chiffre 1 pour l'armement qui doit être conforme aux Règlements de la jauge internationale avant que la cote puisse être assignée.

† Ce signe, précédant une cote, indique que le Yacht est aussi coté dans le "Registre du Lloyd" pour les navires marchands, et que ses échantillons répondent aux Règlements du "Lloyd's Register" pour cette dernière catégorie de navires.

Les chiffres, placés sous une cote, indiquent la date de la dernière visite passée par les Inspecteurs de la Société.

Quand le port et la date de visite figurent sans la cote du Yacht, cela indique que la cote est expirée ou qu'elle a été rayée, soit parce qu'une visite prescrite par les Règlements de la Société n'a pas été passée, soit parce que les honoraires n'ont pas été payés.

MARQUES DE CLASSIFICATION, COLONNES 10, 11, & 12—*suite.*

✠ Ce signe, précédant une cote, comme-ci : ✠100A1 indique que le Yacht a été construit sous la surveillance spéciale des Inspecteurs de la Société.

✠ Ce signe, précédant une annotation de classification de Machines, comme-ci : ✠LMC ✠NE&B indique que les Machines, ou les Machines et les Chaudières, suivant le cas, ont été construites sous la surveillance spéciale des Inspecteurs de la Société.

—— 3,39 Une ligne noire, avec date au-dessous, indique que la cote du Yacht a été retirée du Registre des Yachts de la Société, à la date indiquée, le Yacht ne pouvant conserver sa cote par suite de défectuosités signalées.

—— 3,39 Une ligne rouge, avec date au-dessous, indique que la cote du Yacht a été retirée du Registre des Yachts de la Société, à la date indiquée, le Yacht ne pouvant conserver sa cote par suite de dérogations aux Règlements de la Société en ce qui concerne les visites.

... 3,39 Ce signe, avec date au-dessous, indique que la cote du Yacht a été retirée du Registre des Yachts de la Société à la demande du propriétaire.

Lorsqu'aucune annotation ne figure dans les Colonnes 11 et 12, cela indique que le Yacht n'a jamais été coté au Registre des Yachts de la Société.

EXPLICATIONS DES ANNOTATIONS DU REGISTRE DES YACHTS.

Jauge (colonne 4). La jauge de la Tamise représente approximativement la capacité intérieure d'un Yacht suivant un système de mesurage des Yachts adopté par le Royal Thames Yacht Club, en 1854. La règle, pour calculer la jauge de la Tamise, est la suivante :—Prendre la longueur sur le pont, depuis la face avant de l'étrave à la face arrière de l'étambot et en déduire la largeur, puis multiplier le résultat obtenu par la largeur et ce dernier résultat par la moitié de la largeur et diviser par quatre-vingt-quatorze. Ce tonnage figure dans le Registre pour chaque Yacht, lorsque ces dimensions sont connues, et est imprimée au-dessous des jauges officielles, quand ces jauges sont données.

Pour les Yachts ayant un acte de Nationalité, la jauge officielle, mesurée suivant la loi du pays auquel le Yacht appartient, figure en caractères comme ci-contre : 204·51 (Net) 546·65 (Brut)

Lorsque la jauge figure en italique, cela indique que la jauge n'a pas été mesurée dans le pays auquel le Yacht appartient. *204·51* (Net) *546·65* (Brut)

Dimensions (colonne 5). Les dimensions qui sont imprimées sur la ligne supérieure sont indiquées en pieds et dixièmes de pied et sont celles qui servent au calcul de la Jauge de la Tamise. Dans le cas des yachts qui sont cotés au Lloyd's Register, les dimensions sont celles qui figurent sur le Rapport de l'Inspecteur de la Société pour la première inscription de classification ; pour les yachts qui ne sont pas cotés à la Société, mais qui possèdent un Acte de Nationalité, les dimensions sont prises sur le certificat d'enregistrement du navire. Dans les autres cas, les dimensions sont celles qui sont données sur les états reçus des Propriétaires, des Constructeurs, &c.

La **longueur** qui figure sur la ligne supérieure est mesurée sur le pont supérieur depuis la face avant de l'étrave à la face arrière de l'étambot, sauf pour les yachts non cotés et qui sont inscrits officiellement comme navires anglais, pour lesquels la longueur de douane est indiquée.

La longueur indiquée sur la seconde ligne est la longueur hors tout.

EXPLICATIONS DES ANNOTATIONS DU REGISTRE DES YACHTS—*suite.*

La longueur qui figure sur la troisième ligne est la longueur à la ligne de flottaison.

La **largeur** indiquée est la largeur extrême.

Le **creux** est mesuré, au milieu du navire, depuis le dessus des varangues jusqu'au dessus des barrots du pont supérieur.

La **hauteur** sous barrots est la hauteur maxima entre le haut des varangues ou du parquet de la cabine et la partie basse des barrots du pont supérieur ou du rouf **par le travers des emménagements du propriétaire (salon).**

Le **tirant d'eau** est le tirant d'eau maximum jusqu'au bas de la quille.

La **surface de voilure** mentionnée est la surface des voiles de manoeuvre et est indiquée en pieds carrés.

Date de Construction (colonne 7). La date de construction, qui figure dans le Registre pour les Yachts construits avant 1903 sous la surveillance spéciale des inspecteurs de la Société, est celle du lancement. Pour les Yachts, construits depuis 1903 jusqu'à 1924 inclusivement, c'est celle de la dernière visite d'inspection en vue de la classification, quand la dite visite a été passée dans les six mois après la lancement. Si l'inspection, en vue de la classification n'a pas été terminée durant la période stipulée, la date six mois après le lancement est considérée comme étant la date de construction. Pour les yachts construits postérieurement à 1924, la date d'achèvement de l'inspection spéciale est prise comme date de construction.

La date de construction des machines à vapeur et des chaudières ne figure que lorsqu'elle diffère de celle de la construction du Yacht, et dans ce cas elle est donnée dans la colonne 8.

Yachts Automobiles (colonne 8) :—

"**Alcohol Motor**" indique une machine à combustion interne, utilisant l'alcool comme combustible.

"**Gas Engine**" indique une machine à combustion interne, utilisant le gaz comme combustible.

"**Oil Engine**" indique une machine à combustion interne, utilisant des huiles lourdes comme combustible, telles que astatki, mazout, etc.

"**Paraffin Motor**" indique une machine à combustion interne, utilisant comme combustible des huiles raffinées ayant un point d'inflammation supérieur à 23° C., telles que pétrole, kerosene, huile solaire, etc., etc.

"**Petrol Motor**" indique une machine à combustion interne, utilisant des huiles extrêmement volatiles comme combustible, telles que benzoline, gazoline, essence, etc.

Force en Chevaux nominaux (colonne 8). Formules servant à calculer la puissance nominale :—

1°. Pour les Yachts pourvus de machines alternatives à vapeur si les pressions et les surfaces de chauffe sont connues :—

$$\text{NHP} = \frac{P+340}{1000}\left(\frac{D^2\sqrt{S}}{100}+\frac{H}{15}\right)$$ pressions au-dessous de 160 livres.

$$\text{NHP} = \frac{P+590}{1500}\left(\frac{D^2\sqrt{S}}{100}+\frac{H}{15}\right)$$ pressions de 160 livres et au-dessus.

Pour déterminer la force en chevaux nominaux des turbines à vapeur, $\frac{SHP}{6}$ est à substituer, dans la formule ci-dessus, à $\frac{D^2\sqrt{S}}{100}$ où SHP est la force totale en chevaux sur l'arbre.

Pour les chaudières à tirage forcé on devra substituer dans les formules ci-dessus, $\frac{H}{12}$ à $\frac{H}{15}$.

2°. Si les pressions et les surfaces de chauffe ne sont pas connues :—

$$\text{NHP} = \frac{D^2\sqrt{S}}{100}$$ Machines à Triple et Quadruple expansion.

$$\text{NHP} = \frac{D^2\sqrt{S}}{120}$$ Machines Compound.

$$\text{NHP} = \frac{D\sqrt{S}}{130}$$ Machines Simples.

EXPLICATIONS DES ANNOTATIONS DU REGISTRE DES YACHTS—*suite.*

Dans les formules ci-dessus

D = diamètre en pouces du Cylindre B.P.
S = Course du piston en pouces.
H = Surface de Chauffe en pieds carrés.
P = Pression de travail en livres par pouce carré.

Pour les navires pourvus de moteurs à huiles lourdes :—

$$NHP = \frac{C \times N \times D^2}{\frac{S}{D} + 50}$$

où NHP = Puissance en chevaux nominaux.
N = Nombre de cylindres.
D = Diamètre des cylindres en centimètres.
S = Course de piston en centimètres ; dans le cas de moteurs du type à pistons opposés, S est la moitié de la course combinée des pistons.

C = 0,775 pour les moteurs à 4 temps simple effet.
= 1,55 pour les moteurs à 4 temps double effet.
= 1,395 pour les moteurs à 2 temps simple effet.
= 2,79 pour les moteurs à 2 temps double effet.
= 2,48 pour les moteurs à 2 temps simple effet. à pistons opposés.

Pour les navires pourvus de moteurs à benzine ou à pétrole :—

$NHP = \frac{BHP}{3{\cdot}5}$ formule dans laquelle BHP représente la puissance en chevaux effectifs à la puissance maxima.

R.O.R.C. Rating (colonne 9). Ces jauges ont été fournies par le Royal Ocean Racing Club et sont valables pour marche à voiles *sans* hélice.

* Un astérisque (colonne 9) devant le nom d'un propriétaire indique qu'il a obtenu du "Board of Trade" un brevet de capitaine.

INDEX TO DISTINGUISHING FLAGS OF YACHTSMEN

INDEX TO DISTINGUISHING FLAGS.

To facilitate reference at sea, the Distinguishing Flags have been arranged according to colours :—
1st, Red ; 2nd, Yellow ; 3rd, Dark Blue ; 4th, Green ; 5th, Light Blue ; 6th, Chocolate ; 7th, Purple ; 8th, Black.
Combinations of two or more colours generally follow the principal colour in the order above.
In Flags with vertical designs the colour next the mast is the principal colour ; in horizontal designs, the top colour.

INDEX DES PAVILLONS PARTICULIERS.

Afin de faciliter l'identification en mer, les pavillons particuliers ont été groupés d'après leur couleur dans l'ordre suivant :—
(1) rouge ; (2) jaune ; (3) bleu foncé ; (4) vert ; (5) bleu clair ; (6) chocolat ; (7) pourpre ; (8) noir.
Les combinaisons de deux couleurs ou plus suivent généralement les couleurs principales dans l'ordre cidessus.
Dans les pavillons à bandes de couleur verticales, la couleur à côté du mât est la couleur principale ; dans ceux à bandes horizontales, la couleur supérieure.

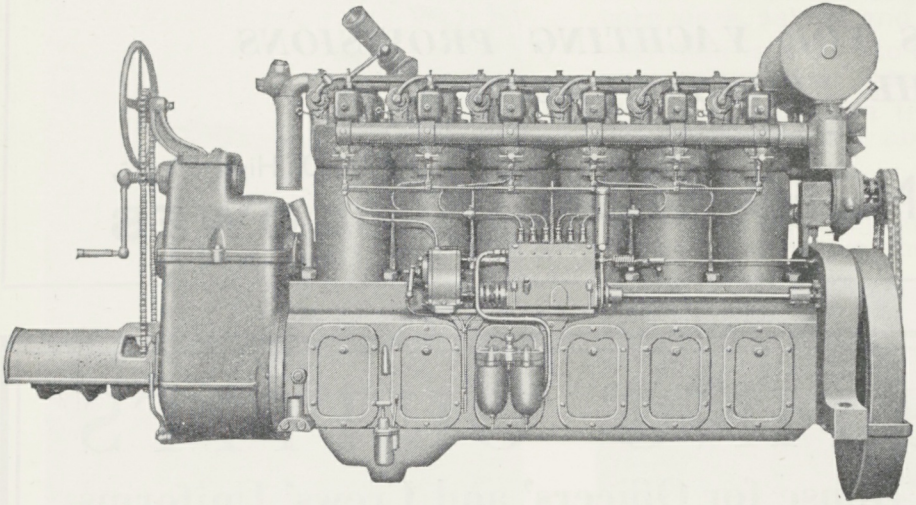
KELVIN

MARINE ENGINES



KELVIN-DIESEL MODEL L6-132 H.P.

The choice of Kelvin marine engines for installation in fishing boats, commercial and official craft, in such numbers is attributable to their outstanding reliability, efficiency, and unequalled endurance.

Yacht owners down the years, have realised that these qualities are coupled to a very high degree of finish, advanced design, and freedom from noise, vibration and smell. As a result, Kelvin marine engines have been installed in over 7,000 yachts and pleasure craft.

KELVIN-RICARDO paraffin and petrol marine engines (poppet valve) are made in four models from 7½ h.p. to 30 h.p.

KELVIN-DIESEL marine engines are full diesel engines of the four cycle, compression ignition, solid injection type, and comply with the requirements of Lloyd's and The Board of Trade. They are made in eight models from 22 h.p. to 132 h.p. The 88 h.p. and 132 h.p. models can be supplied with reverse and reduction gear combined in a single unit at the forward end of the engine, a method of construction with many advantages.

PRICES cover complete marine equipment, including shaft, stuffing boxes, propeller, fuel tanks and all water connections and skin fittings. This is an important point and should be remembered when engine prices are being compared.

LADY OF AVENEL—214 Tons T.M.
Bending the new foresail after conversion 1933.

This type of craft has vanished from the Seas. We were the last to purchase, re-mast, man and take to sea, a square-rigged vessel flying the Red Ensign.

Our knowledge of sailing and power craft, in wood and steel, is detailed and we are no mean judges of effective performance at sea. This knowledge has been acquired in two decades of hard work, ashore and at sea, in the advancement of Yachting.

Attention is drawn to the fact that our Agency Department is well organised in the marketing of Yachts.

We have built up a tradition of understanding in small and large craft and the ability to submit them for sale to best advantage.

If you have in mind to buy or sell a sound seaworthy craft, we will be grateful of the opportunity to discuss the matter. Our service is effective and courteous.

Dear Sir,

If you wish to buy a yacht, please tell us what you require, and we will send you particulars of the most suitable vessels available. You will not be led into the waste of time and irritation of inspecting yachts that are manifestly unsuitable, or inadequately described.

When you are a seller, you will find that we give good service with a minimum of bother to yourself. We charge a little more than some others, but you may be quite pleased with the results — and you will get no accounts for advertising or other extras.

Yours faithfully,

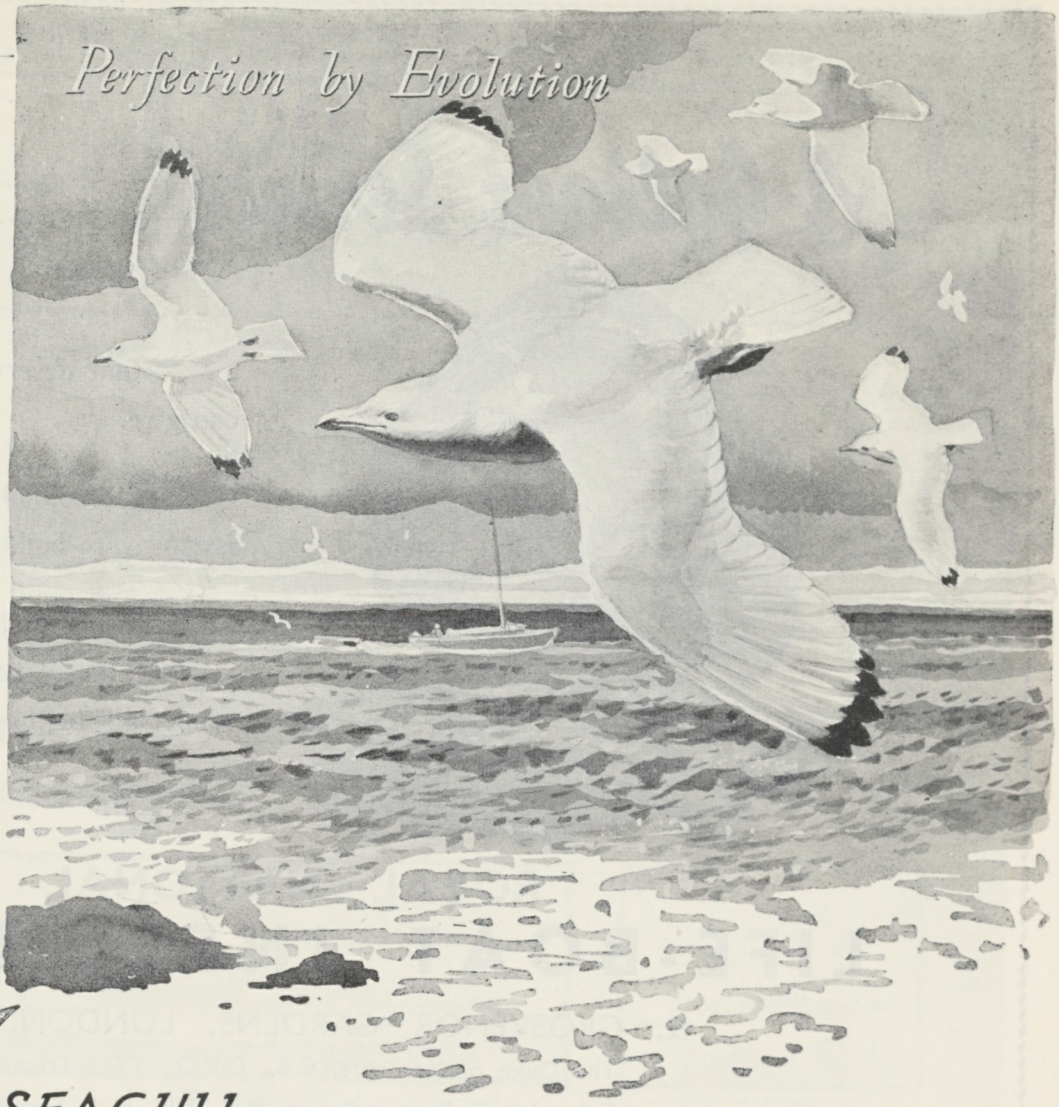
THE KITTIWAKE
(Rissa Tridactyla Tridactyla)



THE Kittiwake, although the smallest of the true gulls, has the greatest staying power, and has followed ships the whole way across the Atlantic. It is, in fact, a creature of the sea and the winds, evolved to its present perfection of air- and sea-worthiness through countless generations from the primeval pterodactyl.

The British Seagull outboard is also a product of evolution, designed by engineers, who are seamen as well, to fill the needs of seamen. During the fourteen years it has been on the market it has been continually improved and goes on improving. Perfection would be a nonsensical claim but we do say it is the best outboard motor in the world.

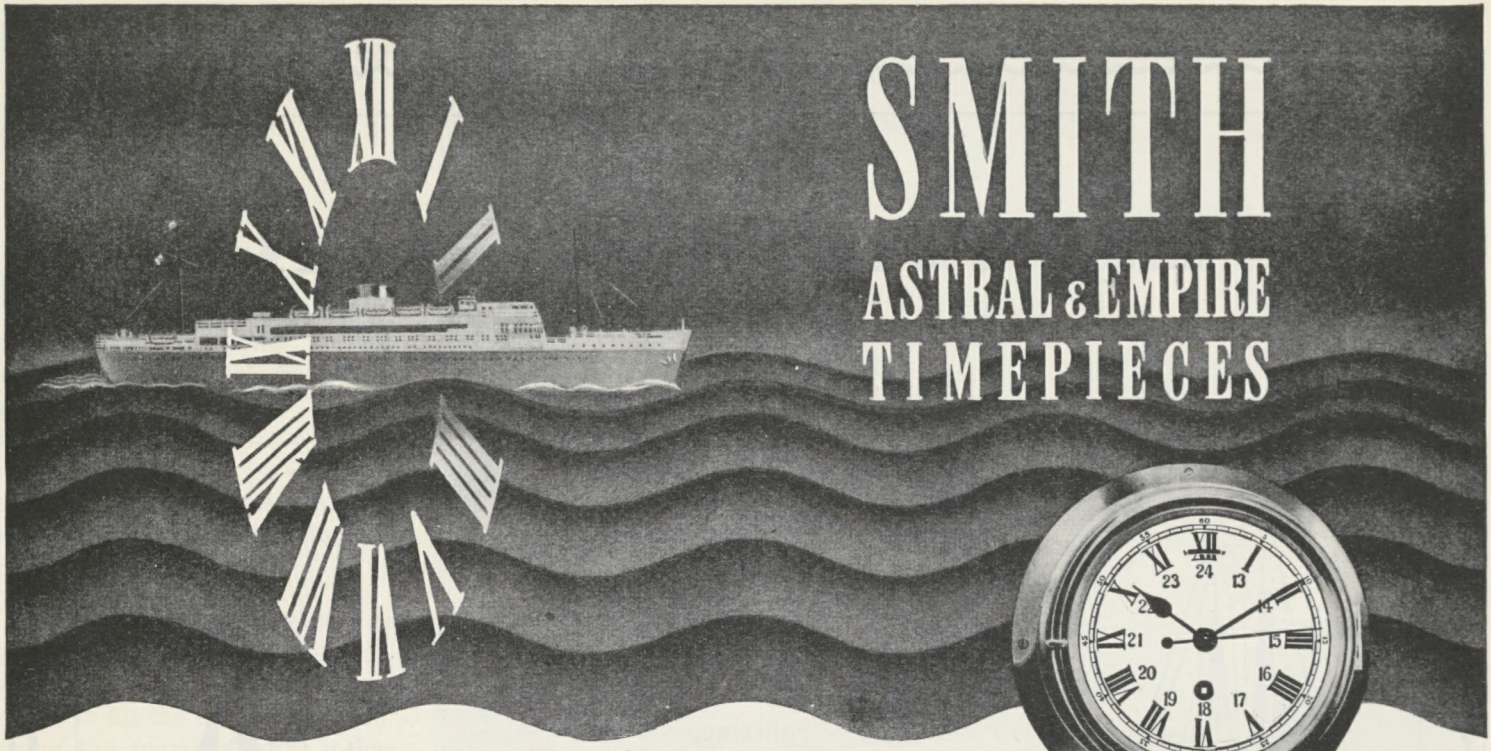
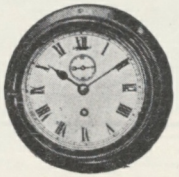
SMITH

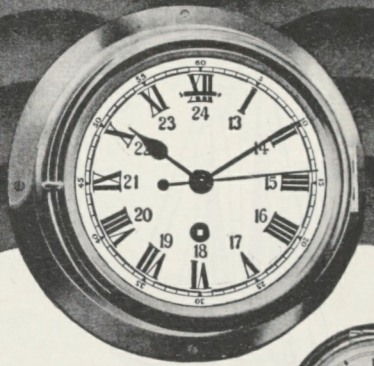
ASTRAL & EMPIRE TIMEPIECES



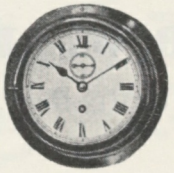
For over 25 years Smith's Marine Lever Clocks have enjoyed a high reputation for consistent reliability and accuracy under even the most gruelling conditions. The many thousands of "Astral" and "Empire" clocks in use on vessels of the Royal Navy, British Mercantile Marine and other maritime nations throughout the world are ample testimony of the confidence placed in them by competent authorities. Models are available for every type of craft and purpose, for both commercial and private owners.

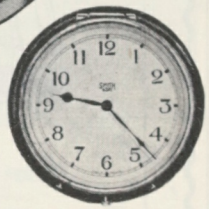


Model 123. Another "Astral" clock with 6" or 8" dial but small seconds. Cases, spun of solid brass. Model 264. Next in quality to the "Astral" models, this clock has an 8-day "Empire" movement and 7-jewelled escapement. 6" or 8" dial with small seconds. Cases, in spun brass.



Model 156. A first quality timepiece with 6" or 8" dial and centre seconds. Non-magnetic 8-day "Astral" movement and 7-jewelled escapement. Cases, spun or solid brass.





"UNIVERSAL". Fitted 8-day dust-proof 7-jewelled lever movement, this clock is heat, steam, dust and vibration proof. Strongly moulded cases in Walnut finish with cream dial. Overall diameter 7"

'CALOR' REGD GAS FOR YACHTSMEN

EVEN if you cannot 'sign on' a pucka cook—you can follow the example of more than 1,000 owners and install 'Calor' Gas. Then cooking on board will be as easy and convenient as cooking in a modern flat; meals will always be first class. And when night falls on the water you will be able to enjoy the comfort of brilliant gas lights. 'Calor' Gas is almost indispensable to the modern and future yachtsman and you can rely on fresh cylinders at your next port of call.

THE COOK ON MORE THAN 1,000 BOATS

'Calor' Gas itself is plentiful, but the demand for 'Calor' Gas Cookers and gas appliances is still greater than present output can meet. But YOUR turn can come soon!

NEW 'Calor' Gas Cooker

This new model Cooker for use in yachts and caravans has an attractive cream and black finish.

Dimensions are as follows:

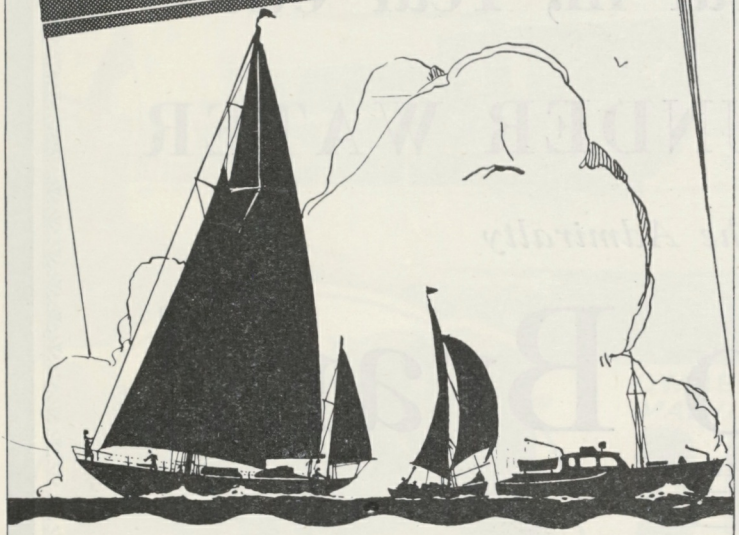
YACHTING MONTHLY

MOTOR & CRUISING



The YACHTING MONTHLY has been for 40 years the practical sailing man's magazine. It is edited and published by people who have their own boats; its articles and designs are selected to interest the owner of the dinghy, sharpie, weekend cruiser or ocean racer. Its regular features include descriptions of yachts and their gear, cruising, racing, designs and "gadgets".

It costs 25/- a year, post free to any part of the world. Published on the 1st of each month.

3 & 4 CLEMENTS INN, STRAND, LONDON, W.C.2.

This is the Flag—

It provides Chaplains and Port Missionaries, hostels and canteens, libraries, games cabinets and a world-wide welfare service.

that gladdens the hearts of our Seamen. They look for it in every port as they have done for over 100 years. After long hazardous voyages, opposing their skill to the forces of Nature—high seas, fog and treacherous currents, and extremes of cold and heat—it means a friendly welcome, entertainment, good food and comfortable beds. It means helpful advice if they need it, and it's a certain link with home.

The work increases and money is needed. Help us, please, to keep this grand old flag flying.

★ **Please send your donation to help this good cause. To the Hon. Treasurer, The Rt.-Hon. SIR FREDERICK SYKES, P.C., G.C.S.I., G.C.I.E., G.B.E., K.C.B., C.M.G.**

GLENIFFER

MARINE DIESELS

IN her day, just before the war, Lexa, whose portrait is "alongside," was probably the best equipped yacht of her class afloat. That she is powered by Gleniffer Diesels goes almost without saying, since for marine propulsion, no better Diesel is made.

The UNIT Compass consists of a well balanced bowl with a remarkably steady card, the bowl is stabilized by a patented lever suspension—and a VERTICAL MAGNIFICATION system is fitted in the binnacle.

This vertical magnification system has the following advantages :—

1. The further away you are from the compass the greater the apparent magnification. Degrees can be seen easily on the $4\frac{1}{2}$" model, 6 feet away.
2. There is no **Parallax**—particularly important where tiller steering is used.
3. Bearings can be taken on the vertical image very easily, by rotating the top.

"Although for day use this is **by far the best yacht binnacle on the market** (and I have inspected everything available before getting you to make it for me), it is as a night binnacle it shows the greatest advance on other designs. It is absolutely perfect for night work."

COLONEL BUCKLE, C.B.E.

Practical Proof

These spares are now in use in a German-built M.A.N. engine. They are giving entire satisfaction. It is practical proof of our ability to make spares for any type of fuel injection system whatever its origin. We have the knowledge, the men and the equipment to do all you can ask of us. Above all, we have a record of satisfactory accomplishment with people whose standards are of the most exacting character. We are ready to give you practical proof of our capacity in this finest precision work.

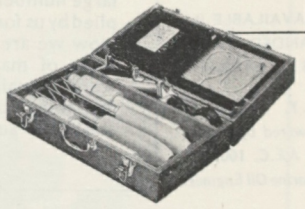
There's fun in danger

Danger adds spice to every sport—but the wise sportsman takes reasonable precautions—the batsman his pads . . . . the climber his rope . . . . and the yachtsman his Schermuly Yacht Rescue Set.

The Schermuly Yacht Rescue Set comprises the amous 150 yard range rocket line thrower as used by H.M. Navy, H.M. Coastguard Service, the R.N.L.I., Trinity House and over 95% of British Ships for establishing line contact between ship and shore or ship and ship in the event of being "driven ashore" or disabled. Two Buoyant Head rockets and Floating lines of the R.A.F. Air-Sea Rescue type for immediate use in the case of "Man Overboard." Two Parachute Distress Signals of 75,000 candle power which burn at 1,000 ft. and are visible over a radius of 25 miles.



Complete set in teak container as illustrated £21 0s. 0d.

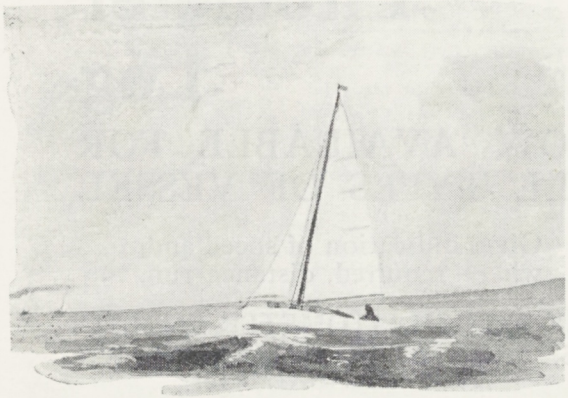
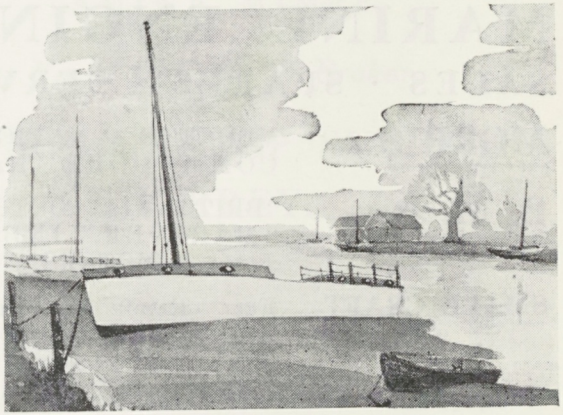
YOUR ship's paintwork, summer and winter, is subject to the corrosive action of wind and water. Only high quality products can weather this treatment. We have specialised for many years in the manufacture of paints, enamels, antifoulings and varnishes which give better protection and smarter finish. For yachts laid up in mud berths, we recommend Winter Protective for bottoms and Varnish Preservative for bright work and varnish. Write for our shade card and other literature and consult us on all your paint problems.





For smarter finish and surer protection—always specify "INTERNATIONAL"

"She looked as if the Queen Mary had rammed her, Mr. Rogers . . .

I've got the craft I want now—but one I thought of buying is in a bad way. She was rammed at her moorings—side stoved in, bows nearly carried clean away. No one saw the collision and the owner was not insured. I'm not taking any risks after that!"

"You'd be surprised how often we hear reports of that kind—fires, collisions, thefts of gear and so on. Nowadays, more than ever, insurance is essential to carefree enjoyment of the sea and river."

TRIM CRAFT

soundly powered

A new fleet of eight 26-feet Customs Cruisers has just been completed by The Yorkshire Yacht Building & Engineering Co. Ltd. for the Lebanese Government. These efficiently equipped craft are powered by Morris Marine Engines and have fuel capacity sufficient to keep the boat going at full speed for 48 consecutive hours. Standardised by the leading boat builders of this country, Morris Marine Engines ensure economical running and sturdy, unfailing service under all conditions.

Built exclusively for marine use, Morris Marine Engines are approved by Lloyds for open sea service.

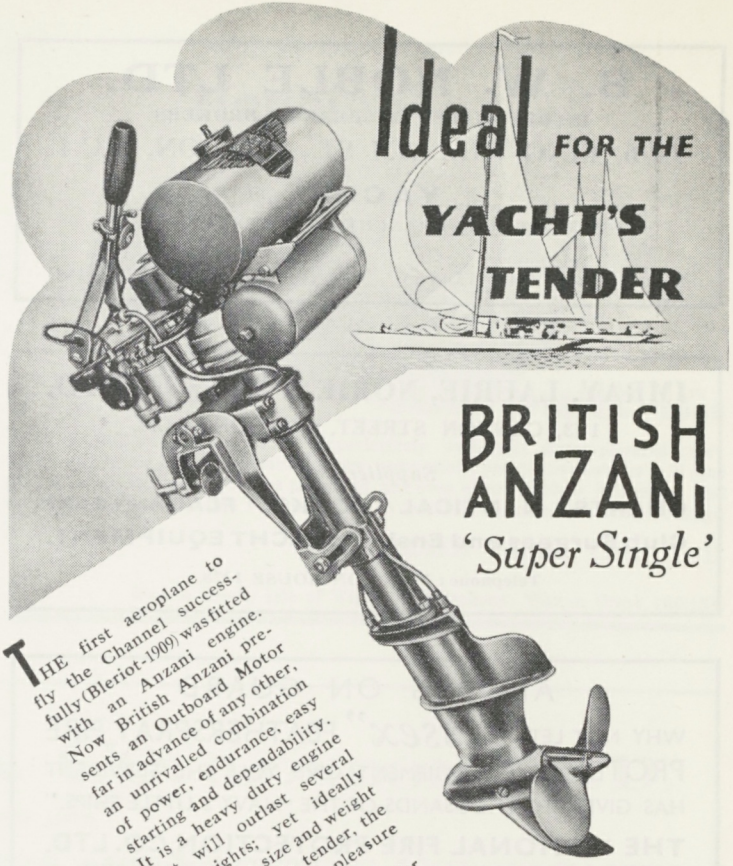
Ideal FOR THE YACHT'S TENDER



BRITISH ANZANI *'Super Single'*

THE first aeroplane to fly the Channel successfully (Bleriot-1909) was fitted with an Anzani engine. Now British Anzani presents an Outboard Motor far in advance of any other, an unrivalled combination of power, endurance, easy starting and dependability. It is a heavy duty engine that will outlast several lightweights; yet ideally compact in size and weight for the yacht's tender, the angler, or the pleasure cruising dinghy. Originally produced for the Admiralty, it had to be more than good. It is acknowledged to be miles ahead of all competitors.
